

A COMEDY OF ERRORS

Sam loved kids and figured the more time he spent with them, the less crime there would be on the island. One of his favorite games was to hand out copies of a drawing with a known number of mistakes and challenge the class to find all of them. When they protested that the test was so hard that he himself wouldn't have been able to pass it, he challenged them to give him a drawing with a known number of mistakes and see if he could find all of them.

They accepted the challenge. After a week of figuring out a tough one, they handed him the drawing shown here. He studied it for about five minutes before returning it with a list of the mistakes he'd found.

"Thirteen," he said. "What mark do I get?"

The class was divided. Half of them wanted to give him a mark of 100%, the other half voted for an A+.

How many can you find?
